

2021 Security & Compliance ESSENTIALS

for Multiemployer Benefit Plans

Secure hosted applications

83% of organizational workload is migrating to the cloud¹ with the continued growth of work-from-anywhere. Hosted benefits processing applications are key to protecting PHI and other sensitive data.

Choose an independently audited, SOC 2 Type II-certified technology vendor to ensure the security, availability and privacy protection of your data and hosted applications.

Eyes on who is accessing your data

48% of organizations have lax data permissions² that give more employees than necessary access to sensitive information.

- ✦ Insist on easily configurable controls that let you manage and adjust who accesses your data, with roles you can define to match your organization's regulatory and privacy responsibilities.
- ✦ Incorporate audit logging that lets you record who accesses, downloads and changes records within your system.

Proactive regulatory compliance

No Surprises & Transparency Act. New W-4P and W-4R forms. PBGC relief³ in the new COVID bill. And that's just some of [this month's](#) relevant regulatory news.

Be confident your organization is ready for ever-evolving regulations by choosing a vendor with a proven history of keeping customers informed and compliant.

Password smarts and two-factor authentication

Ransomware attacks in the US increased seven-fold from 2019 to 2020⁴.

36 [billion](#) records were exposed in data hacks last year. Is your organization keeping software updated, using two-factor authentication and incorporating

other best practices to protect your data and your system?

Choose a vendor with the expertise and technology to keep hackers and ransomware attacks from grinding your benefits operation to a halt.

With more than 40 years experience serving multiemployer benefits plans, basys is rated #1 by customers for security and compliance.
